

**Accelerated embryonic developments associated with embryonic aneuploidy after trophoctoderm biopsy and complete chromosomal screening: a case report.**

*JC. Castillo, J.Ten, R. Bernabeu. SEF Congress. Barcelona. May 2014.*

For a patient who comes to receive eggs and the embryos show an accelerated division during development, this fact before, you decide to extract some cells (embryo biopsy) for genetic evaluation, finding that these embryos were carriers of chromosome anomalies. The conclusion is that an accelerated embryonic development could be associated with chromosomal abnormalities.
